QUESTION 1

✓
Correct Answer

Score 20

Hello › Coding

QUESTION DESCRIPTION

Write a run-able program to read a name from the standard input and output "Hello, " followed by that name.

For example:
Input: HackerRank
Output: Hello, HackerRank

This is not a tricky question, we just want you to know how to write a run-able program and how to read input for std.

CANDIDATE ANSWER

Language used: **Scala**

```scala
// main method in "Solution" will be run as your answer, do not change the object
name.
// you should replace ??? with your implementation
object Solution extends App {

    val input = StdIn.readLine
    println("Hello, "+input)

}
```
